

Delivering better profitability...

Discover how fissara® software helps mobile engineering teams operate more efficiently and make significant cost, time & administrative savings.

fissara® MANAGE is a cloud-based workforce management platform that helps engineering companies manage their staff and projects in one place.

With all your job management and communication tools in fissara MANAGE, your business will benefit from enhanced service and compliance, and significantly improved operational capacity.

Adamas, a respected industry expert, has seen considerable improvements in operational capacity and compliance since they started using fissara® in their telecoms and wind energy businesses in 2020. The company provides engineering support, including installation of 5G masts and technology, and asset management and maintenance for wind energy technology.

Improved capacity and performance

Since its implementation into Adamas, fissara® MANAGE has helped the company:

Move towards paperless working by migrating operations and job management into fissara's central cloud-based platform. Cost of sales, job accuracy, and speed of project delivery have all improved as a result.

View and control the activities of their mobile workforce in a more structured and efficient way for every job. Relying on email, Word and Excel are a thing of the past.

Deliver essential job information instantly using the field engineer's mobile app. Field engineers receive up-to-minute job information, technical updates, health and safety notes and activity plans for every job before they attend.

Receive and store information from field engineers more quickly and efficiently using custom forms in the engineer's mobile app. This has simplified job management and improved information accuracy and timeliness.

Operate within social distancing guidelines by using fissara's dedicated data capture tool to store photos and critical job information. The need for interaction between staff, and visits to the office, has been greatly reduced.

Analyse job progress quickly and efficiently using fissara's Task List Report; every job has a pre-task list which ensures the job is progressing as planned, notifying Adamas when engineers are ready to attend a customer site.

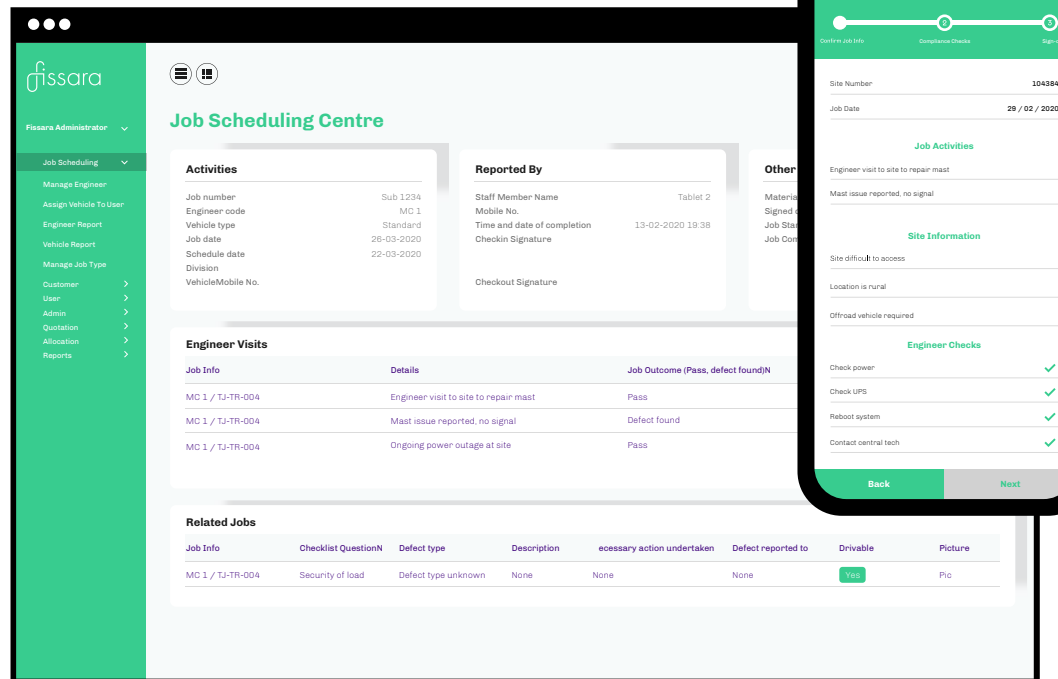

Covid-Safe Remote Installation Service (RIS)

Adamas chose fissara RIS, our no-contact product installation service. All aspects of product installation, setup and configuration were conducted remotely by fissara's UK-based technical team. Product training and staff onboarding was conducted via scheduled video meetings, ensuring that Adamas staff were ready to use fissara prior to launch.

Evolve your job management into the digital era with fissara®

Evolve to paperless digital workflows, job management and communication.

Save time, money and effort by managing individual jobs and tasks in real-time via the dedicated engineer's mobile app and desktop interface.

Since using fissara, we have been able to deliver our services in a quicker and more efficient way across both our telecoms and wind energy businesses. Our reliance on paper-based working has reduced significantly which has led to improved accuracy and hefty gains in workforce efficiency, not to mention an enhanced level of compliance with health and safety procedures which are an essential part of our business operation.

Essentially, using fissara to manage our field engineers has changed the way we operate as a business for the better.

David Still CBE, Chairman, Adamas Group
